

WHEEL

**** SUMMARY

The best everyday size is 584mm BSD / 27.5 / 650b

Names 650b & 27.5 are dumb; look like measurements but are not
So just use BSD and refer to 29 WITHOUT UNITS - ie not as 29 inch
Only show units on BSD, as is an actual measurement. So a classic mtb is a 26 or 559mm

559mm Classic 26mtb great size but out of regular production
590mm Classic 3-speed great size but out of regular production
622mm 29mtb / 700c big modern size makes bike geometry harder
use that extra 38mm / 1 1/2" for tire, fender, toe clearance & lower standover
630mm 27 old road bike standard is very large and not in production
